

Experience with 5.5.3

The release of a new software version is always an exciting time for Integra, and Agresso Business World 5.5 service pack 3 is no exception. Contact us to discuss how your business can benefit from the new features.

In a competitive climate business systems need to continually evolve and adapt to help their customers retain a competitive edge. At Integra we are always excited by the possibilities of a new version, and keen to explore what value they can provide to our customers. We have been assisting customers in both upgrading existing functionality, and in utilising the new features of each new version of Agresso for many years. Agresso Business World 5.5 service pack 3 (5.5.3) offers enhanced functionality in several areas, particularly procurement which is used by many of our customers and a new fixed assets module.

Integra has been working with 5.5.3 since October 2008, and currently we have four consultants actively engaged in 5.5.3 projects for five different customers, and many more projects scheduled.

We have set out a brief summary of the projects we have been working on recently below:

At a Metropolitan Borough Council we have undertaken a review of 5.5.3 Workflow and Data-load which was initially configured by the vendor. Integra were able to make a number of recommendations and suggestions which enabled the Council to select an alternative, more bespoke approach, which was better suited to their

operations. We also reviewed Data Control and Menu Access, and were able to assist the council to streamline an area which had become complex and high in maintenance overhead during the transition to 5.5.3. A bespoke SQL view provided a clearer picture of the council's set up.

For a Not for Profit Organisation Integra has created ARC reports for the Purchase and Sales Order Processing modules and advised on setting up file structures, menu access and the latest version of Report Engine.

We have developed ARC reports for a leading University in the South West and an International Property Company.

For a Specialist Business and Technology Consultancy we have implemented the new Fixed Assets module.

As well as the above, our team has provided 5.5.3 application consultancy in most modules including General ledger, Accounts Payable, Accounts Receivable, Bank Reconciliation, Workflow, PCB, Expenses Ledger, HR and POP.

All of our Consultants are undertaking a program of internal training for 5.5.3.

"There are always opportunities to add value in a new release and we are working hard to ensure that our customers can get the best out of 5.5.3."

Mark Bloomer – Managing Director

Integra Associates is an independent consultancy specialising in implementing financial business solutions and is made up of qualified accountants and IT professionals.
