

OUR EXPERIENCE:

Our team has been working on ABW upgrades for over sixteen years, from Agresso version 3 right through to Route 66.

All of our consultants and project managers have been through a number of upgrades, and this experience can bring really significant benefits, cost savings, and assurance to your upgrade project.

We have worked on upgrades for both public and private sector organisations across a variety of sectors, in the UK and overseas.

Our upgrade experience includes like for like projects through to projects where the client has taken the opportunity to completely re-engineer the system, introduce new modules, and roll-out the system globally.

ROUTE 66 UPGRADE

UNIT4 has reformed the way they release upgrades for ABW with a new strategy designed to complement the development focus of supporting organisations through constant change.

The new approach will make future upgrades less disruptive and make it easier to reap the benefits of ABW developments in a cost effective and time managed way.

Benefits include enhanced user experience, improved web based functionality, greater automation, and ease of deployment.

There has never been a better time to upgrade to Route 66 and enjoy the benefits of a new platform for future development.

Integra's Upgrade Services

Integra has a systematic and controlled approach to upgrades which has been proven in many successful upgrade projects.

We build an understanding of, and advise on the scope and ambition of your upgrade project and the constraints involved.

We then put together an upgrade plan which will work for you, realising a smooth transition, maximising business benefits, and avoiding the potential risks and pitfalls.

Our Services

We deploy a comprehensive and unrivalled set of skills to achieve a smooth, safe and cost-effective upgrade, whether you are looking to upgrade on a 'like for like' basis or to take full advantage of the new features available.

We can deliver a fully integrated

'turn-key' service for your project, or deliver services individually.

▶ Project Management – we can support your in-house project manager with our specific skills and experience of ABW upgrades, or take full project management responsibility for your upgrade.

▶ Application Skills – our experienced team of consultants can advise on business process, optimum system configuration, how to make new features work for your organisation and effective testing of the upgraded system.

▶ Technical Skills – we have a high level of technical skills including software installation, database upgrade, and upgrade of bespoke work.

▶ Training – following an assessment we can provide training to your project team, technical staff and end users including the development or upgrade of training materials.

▶ Post Implementation – review and support of the upgraded system is essential to the project's success.
